EPRI

ENTERPRISE ARCHITECTURE MATURITY ASSESSMENT

PROJECT HIGHLIGHTS

- Assessment of your company's Enterprise Architecture Maturity

- A better understanding of what is required to increase maturity

- Greater understanding how your company's latest priorities and strategic objectives will benefit from increased maturity in certain area

Background, Objectives, and New Learnings

Recent feedback from project set members at the Enterprise Architecture (EA) Task Force and the Advisory sessions have provided valuable insights into how utilities view their company's Enterprise Architecture Integration efforts. Project set funders have mentioned that they would like to better understand their Enterprise Architecture maturity, and how their company compares against other utilities, including where their company can improve next. This new supplemental project opportunity is a direct result of two deliverables that are updated each year:

- Top Ten Indicators of Enterprise Architecture Maturity Collects attributes of a mature EA practice at utilities and industry at large, ranked in a maturity model format. A survey of questions to uncover the maturity level at a utility and

- The Utility Enterprise Architecture Guidebook This guidebook seeks to address a gap between reading a leading enterprise architecture reference such as The Open Group Architecture Framework (TOGAF) and being able to apply it. TOGAF is a valuable resource that generically describes the process of developing architecture, novice practitioners of enterprise architecture often do not know how to get started or how to apply the methods in TOGAF to develop an architecture in a utility context.

Benefits

This project can benefit EA teams at funding utilities and non-funders of Enterprise Architecture and Integration. The project addresses gaps in EA as Strategy, the Business-IT relationship and business architecture. EPRI's EA project set (161E) will benefit from industry knowledge of the state of the industry and where EPRI can contribute.

Project Approach and Summary

Each participating utility in this project opportunity will receive a specific assessment of their own EA maturity and an understanding of what is required to increase maturity. In addition, the utility will understand how their latest priorities and strategic objectives will benefit from increased maturity in certain areas.

Deliverables

Each participating utility will receive an individual report of their Enterprise Architecture Maturity Assessment (scoring)

Price of Project

The cost to join this project for each participant is: $25,000 (single funding).

Project Status and Schedule

Project will start one month after funding is complete.

Enterprise Architecture Maturity Assessment

EPRI will measure the maturity and scope of an organization's Enterprise Architecture practice.

Who Should Join

Utilities who would like to understand their Enterprise Architecture maturity and how they compare against other utilities and where they can improve next.
